**Technical Analysis** is an Advanced Course for self-trading and in Broking houses, financial institutions, Hedge Fund Management & Portfolio Management entities. This course is based on experience and research done for past 10 years in the Indian stock market. Stock market is a place where one can earn a handsome profit in any direction of the market; also it requires good skills, knowledge and good reflexes.

**NSE courses, SEBI courses and BSE certification courses are now in huge demand in Financial Markets.** These institutions need technical experts to serve their clients or for sell side analysis. This course is for NCFM certification examination by Education wing of NSE & SEBI as a professional **TECHNICAL ANALYST.**

This course includes preparation and certification of NSE NCFM along with theoretical and practical sessions on live software used in stock market trading. We provide studies on **tradingview.com & investing.com.** Also other paid software will be recommended as per need.

Technical Analysis is a method used to predict the future prices on the basis of historical price, volume and open interest. Technical Analysis can help investors anticipate what is likely to happen in coming days, weeks or months. You can easily interpret the trend of the market with the help of Price Analysis.

You will be trained to understand different types of charts which provide the inertia of the market trends. The magic of Candlestick Patterns is that they provide earlier signals on the top and bottom of the market where the reversal is possible. With the help of Trend line, Support & resistance you can identify some classic patterns for short term and long term investment. There are many and unique indicators and oscillators which helps you to identify the trend of the market, overbought - oversold and divergence indications, where the market trend may reverse for a bigger retracements.

Technical analysis is applicable to all trading securities like stocks, commodities, futures, options etc., where the price is influenced by the force of demand and supply. A technical analyst believes that the current price fully reflects all information about the securities. Likewise many trading strategies will be discussed with live practical analysis.

## Why to Learn Technical Analysis Course?
